

Modifying the Font for a Host Session

This feature is only available in the Terminal Viewer. It is only available when it has been allowed by the administrator (see *Users* in Entire Screen Builder's *System Management Hub* documentation).

You can define another font to be used for the current session. If you logged on with your user ID, your new font definition is written to your user profile on the Entire Screen Builder Server. If you logged on as an anonymous user, it is written to the local Windows registry.

► To modify the font

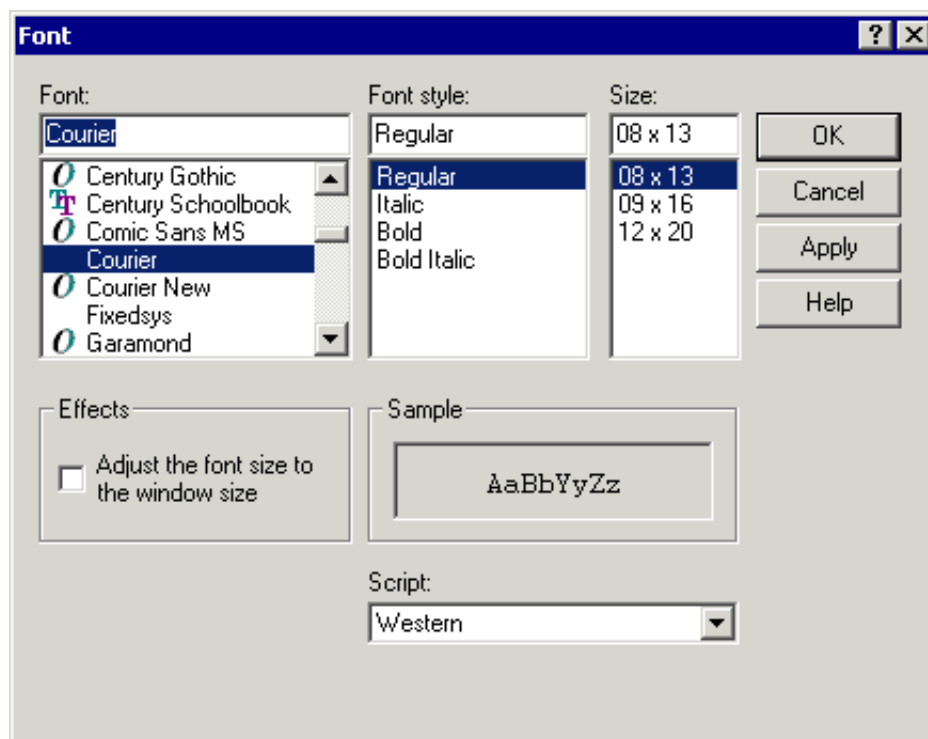

1. From the **Session** menu, choose **Font**.

Or:

Choose the following toolbar button:

The Fonts dialog box appears:

2. Define the desired font, font style and/or size.

A size can only be specified for a monospace font. It is only possible to specify a size that is listed in the drop-down list box. When you specify another size manually in the text box, this size will not be used.

The **Adjust the font size to the window size** check box applies to raster fonts only. For TrueType fonts, automatic resizing is always enabled. Select this check box to adjust the size of the selected font to the window size. Adjusting the font size is done by increasing or reducing the spacing between characters and lines. This may result in truncated characters.

The **Script** drop-down list box contains a list of all available language scripts for the selected font. Make sure to specify a script that is compatible with the language that has been set up for your computer.

3. Choose the **OK** button.
